

MTL SD Modular range

Safeguards electronic equipment
and systems against surges on
signal and I/O cabling

- Slim, modular, space saving design
- Available with Screw/Spring clamp terminals
- Multi stage hybrid circuit
- 20kA maximum surge current
- Voltage ratings to suit process I/O applications
- Intrinsically safe
- ATEX, IECEx, Class I Div 1 & Class I Div 2 certified
- 10 year warranty

The **MTL SD modular** range takes the established SD range of high performance surge protectors for I/O and introduces a replaceable element. Maintaining the unrivalled packing density and field proven hybrid circuit design the modular range makes maintenance easy, enabling the replacement of surge protection modules without disconnecting the loop.

The **multi-stage high performance hybrid circuit** provides protection for I/O in the most demanding applications in the most hostile areas of the world where the traditional SD has been established as a market leader. Each plugin module provides full hybrid line-line and line-ground protection.

The **base design can double up as a basic feed-through terminal** to which the surge protection is added at a later stage. The SDFTMXX module should be selected for permanent feed through applications.

The **MTL SD modular range of products is backwards compatible** with existing installed SD's. The footprint will enable the user to replace already installed SD's with the new modular design.

The **addition of the MTL SD modular will enhance any process control system** by ensuring maximum availability and ultimate reliability. These surge protectors will ensure the operation and up-time of the most critical systems failure.

The **MTL SD**MXL diagnostic LED option**, provides visual indication of degradation of voltage limiting components, reducing the effectiveness of the surge protection module, generally after repeated surge events. The LED variant is optimised for AI/DI applications. The LED option will assist maintenance personnel in rapidly identifying the failed module requiring replacement.

The **MTL Data surge tester** allows the continued effectiveness of the surge protection function to be tested by removing the surge protection module from the base and plugging it into the tester.

Designed from the outset using our experience of safety management the MTL SD modular will be suitable for use in safety systems most commonly used today. Additionally our leadership in the intrinsic safety market guarantees attention to detail where safety is paramount.

The **hot swappable design** of the SD**M module with the SDBE-BC* feed-through base option allows replacement of the module without interruption of the process signal. Careful design, to give a "make before break" contact configuration, is further enhanced by the earth connection being the first to "make" and the last to "break" giving added safety for taking any residual voltages down to earth. Hot swap only permitted when mounted in the safe area.

The **cable screen** can either be connected directly to Earth with the SDBE-B*N option or alternatively the screen is isolated from ground with a Gas Discharge Tube (GDT) providing a path to ground during a surge event with the SDBE-B*G version.

The **MTL SD**MFX fuse option** provides both fused protection against fault currents and a convenient method of isolating field circuitry from protected circuitry without needing additional disconnect terminals. The standard fuse (which is replaceable) is rated 250mA. As an example, this feature is of particular value in applications in which an SPD is used with a bulk power supply feeding multiple loops. The individual module fuse prevents a fault or follow on current on one loop disrupting the power supply to the others. Also, loops can be removed from the circuit for maintenance reasons or added without needing additional disconnect terminals. Where only the disconnect feature is required, the SD**MDX solid link disconnect option can be selected.

One simple operation clamps the base securely to the DIN rail and automatically provides the high integrity earth (ground) connection.

Screw & spring clamp terminals offers a secure wire connection in SDM range SPDs.

MTL SD Modular range

July 2024

SPECIFICATION

All figures typical at 25°C (77°F) unless otherwise stated

Protection

- Full hybrid line to line
- Each line to screen/ground

Max discharge surge current (I_{max}) (L1-G, L2-G) 20kA (8/20 μs)

Nominal discharge surge current (i_{sn}), C2 10kA (8/20 μs)

Lightning impulse current (I_{imp}) (10/350μs), D1 2.5kA

Response time <1ns

Ambient temperature

- 40°C to +80°C (-40°F to 176°F)
- 30°C to +75°C working for Ex ia IIC T4 Ga & Ex ec IIC T4 Gc (except for ‘-HC’ models)
- 30°C to +45°C working for Ex ec IIC T4 Gc and -30°C to +75°C working for Ex ec IIC T3 Gc (for ‘-HC’ models)
- 40°C to +80°C (-40°F to 176°F) storage

Humidity

- 5 to 95% RH (non-condensing)

Category tested

- A2, B2, C1, C2, C3, D1

Overstressed fault mode (i_n=3kA) 17kA

Impulse durability (8/20μs) 5kA

Terminals

- 2.5mm² (12 AWG)

Mounting

- T-section DIN-rail 35 x 7.5 or 35 x 15mm rail (1.38" x 0.3" x 0.6")

Weight

- 70g approximately (2.5oz)

Case flammability

- UL94 V-2

AC durability

- 1A_{rms} 5T

Service conditions

- 80kPa - 160kPa, 5% - 95% RH

EMC compliance

- BS EN 61326-1

IEC compliance

- IEC/EN 61643-21

ANSI/IEEE testing

- C62.41-1-2002, C62.41-2-2002, C62.45-2002

DIMENSIONS

Model	Nominal voltage+ (U _n)		Nominal current (I _n) *	Series resistance	Max. leakage current	Rated voltage (MCOV)	Voltage protection level (U _p) @ 1kV/μs (V)	Residual voltage @ 5kA (V)	Bandwidth (frequency)	Special feature
	(Vdc)	(Vac)	(A)	(Ω/line)	(μA)	(U _c)			('G)	
SD07M	7	5	0.7	< 1	500	7.7	<12	25	220kHz	Low resistance
SD16M	16	11	0.7	< 1	5	17	<25	35	220kHz	Low resistance
SD32M	32	22	0.7	< 1	5	36	<45	60	220kHz	Low resistance
SD55M	55	38	0.7	< 1	5	62	<90	90	220kHz	Low resistance
SD32M-HC	32	22	4	< 1	5	36	<80	<80	High Current

Note: all figures are typical at +25°C unless otherwise stated. * If F version is selected, current is limited to 250mA.

Definitions of terminology used in table.

- Working voltage (Un)**
Maximum voltage between lines or lines/ground for the specified leakage current
- Maximum leakage current (Ic)**
Maximum current drawn by the SPD at the working voltage
- Maximum continuous operating voltage (Uc)**
Maximum voltage that can be applied to the protected terminals without damage
- Voltage protection level (Up)**
Peak output voltage after injection of test impulse from 1kV/μs generator (often known as ‘let-through’ voltage)
- Bandwidth**
Frequency range up to which ac signals can be transmitted without undue attenuation; 3dB into 50Ω

SIL compatibility

The SD**M** module can be used in SIL 3 loops based on analysis conducted under IEC61508 type A “non complex” hardware. Dependent upon the defined system/loop test interval and the hardware fault tolerance the module will demonstrate compliance with SIL 3 systems.

APPROVALS

(For the latest certificate information, see www.mtl-inst.com/certificates)

ORDERING INFORMATION

Order insert and base together (see below) - or individually

Part number codes - MODULE INSERT

†FX is not available in HC version
** Applicable for 32V. HC models are not covered by existing approvals

FEED THROUGH MODULE

BASE MODULE

- B- SCREWTERMINALS
 - C- SPRING CLAMPTERMINALS*
- *Not covered under existing approvals

MTL DATA SURGE TESTER MLDT28500

To order a module with base, specify, for example: SD 16 M D X - B D G to obtain a 16V insert with disconnect link in a base with screw terminal signal disconnect on removal of insert and GDT isolation.
